

I/C Host Interface

I/C Host Interface functions as one part in a suite of applications that automates and facilitates the process of importing inventory control transactions. I/C Host Interface can import physical stock counts, stock transfers, I/C receipts, assemblies, shipments and adjustments from data collected on hand-held terminals into ACCPAC Inventory Control. It interfaces directly with MJD Nexus, for efficient, streamlined file management. It allows users to select specific transactions to import, or it can automatically import any transactions downloaded from a hand-held terminal. I/C Host Interface has extensive logging and error reporting capabilities. It installs directly into ACCPAC Advantage Series Inventory Control, for comprehensive integration.

I/C Host Interface can be part of a complete I/C data collection solution when combined with:

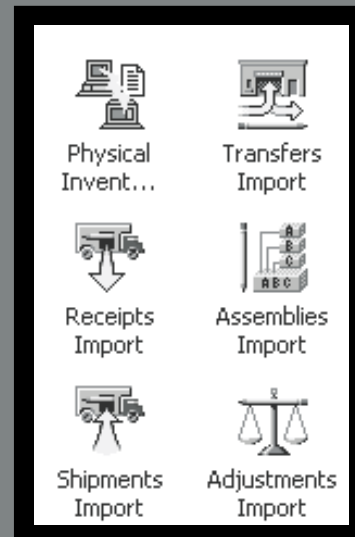

- One of MJD's hand-held data collection programs for I/C
- MJD Nexus, to transfer data to/from hand-held terminals and PC
- PBT for Windows, to store bar codes and print labels

Key Features

- Automates & simplifies the importing of I/C transactions: stock counts, receipts, transfers, shipments, adjustments and assemblies
- Fully integrates with ACCPAC Advantage Series Inventory Control
- Eliminates manual data entry errors
- Catches data with errors and/or critical problems
- Integrates with MJD hand-held applications for I/C

System requirements

- ACCPAC Advantage Series Inventory Control

I/C Host Interface imports I/C transactions from data collected on a hand-held terminal into ACCPAC Advantage Series. It operates in manual or automated mode, and logs all events and errors.
