

# MJD Software

MJD has been innovators in this field for over twelve years.

All our products are designed to integrate tightly with either ACCPAC Plus or ACCPAC Advantage Series to give you greater control over your inventory.

**M**JD Software develops and markets automated inventory tracking solutions, integrating new technologies such as bar-code printing/scanning and portable computing into ACCPAC Advantage Series™ and ACCPAC Plus™ accounting. MJD has bar coding solutions for receiving, physical inventory, shipping, picking and other product movement functions. MJD has over 30 different bar coding applications for ACCPAC®. If you are in the business of moving inventory, and you want to reap the benefits of bar coding, MJD Software has a solution.

MJD Software's powerful data collection tools will increase your bottom line by cutting data entry times, automating processes, reducing human error, and increasing transactions volumes. MJD develops solutions solely for ACCPAC accounting software. As a result, our products are designed to integrate into ACCPAC in a clean and flexible manner.

## Our Strengths

### Integration:

MJD Software applications integrate directly into the ACCPAC environment. In addition to integrating with core modules, we also integrate with ACCPAC Options™ Add-On modules such as Serialized Inventory.

### Service & Support:

MJD is renowned for the quick and efficient manner in which we support our products. Also, since we sell the bar coding hardware that our applications use, we can support it as well.

### Customization:

Our products are designed from the ground up to be flexible and configurable by the end user. They can be easily customized by you or your ACCPAC consultant to fit your specific needs and requirements. In addition to our standard applications, we can also create custom bar coding applications to meet your needs.

### Hand-held Applications:

Many of our products operate on powerful and robust portable hand-held terminals with integrated bar code scanners manufactured by Symbol Technologies. These terminals are designed for even the harshest warehouse environments. MJD applications use batch terminals for ease of use and implementation, and because they are more cost effective to ACCPAC users.

### Peripheral Products:

Along with our software products, MJD also distributes the bar code hardware that our applications use. This means you get a total solution—software & hardware, all from one source, guaranteed that they will work together. We carry a full line of bar code scanners, printers and printing consumables.

Data Collection Solutions

# Bar Coded Inventory Tracking Solutions

Compatible with ACCPAC Advantage Series Small Business, Corporate and Enterprise Editions; versions 4.1A or higher; Pervasive SQL, IBM DB2 and MS SQL databases.

MJD has other bar coding and product movement applications; contact us or your ACCPAC consultant for more details.

## ■ PBT for Windows

A bar code database and bar code label printing application, with the ability to translate bar codes scanned into any ACCPAC Advantage Series item field.

## ■ Starship Link

Provides a two-way link to send shipping data to and from Starship shipping software and ACCPAC Advantage Series Order Entry.

## ■ MJD Nexus

Links applications running on hand-held terminals to ACCPAC in an efficient, robust and automated manner.

## ■ PI Live

An inventory collection program that runs on a portable hand-held terminal. Item & bar code databases are uploaded to the hand-held for verification & identification of scanned bar codes.

## ■ I/C Host Interface

Manages the import of stock counts, receipts, transfers, assemblies, etc., hand-held generated files and ACCPAC Advantages Series Inventory Control.

## ■ Stock Transfers Live

A stock transfer data collection program that runs on a hand-held terminal. Item, bar code and location databases are uploaded to the hand-held for verification and identification of scanned bar codes.

## ■ Live Receipts

A receipt data collection program that runs on a portable hand-held terminal. Allows for either the uploading of PO's to be verified against physical receipt, or the creation of "blind receipts".

## ■ P/O Host Interface

Manages the export and import of purchase order and receipt data into ACCPAC Advantage Series Purchase Orders.

## ■ Live Picking Portable Application

An order picking program that runs on a hand-held terminal. It ensures that the picker picks the correct items and quantities, thereby virtually eliminating shipping errors.

## ■ O/E Host Interface

Manages the export and import of picking files between ACCPAC Advantage Series Order Entry and MJD's Live Picking Portable Application.
